PATENT

## **CLAIMS**

- 1. (currently amended) Device (20; 40) for operating a blind comprising a winding drum (4; 42) carrying at least one cord (2, 5) connected to the blind and a mounting (9; 41) for this drum (4; 42), produced in at least two parts (9a, 9b; 41a, 41b) which when assembled leave through holes (21a, 21b, 22; 47a, 47b, 48) for the passage of the cords (2, 5), characterized in that wherein each of these parts (9a, 9b; 41a, 41b) has a direct and/or indirect support function for the drum (4;42).
- 2. (currently amended) Operating device (20; 40) according to Claim 1, wherein characterized in that the parts (9a, 9b; 41a, 41b) of the mounting are assembled by non-permanent connections.
- 3. (currently amended) Operating device (20; 40) according to Claim 2, wherein characterized in that the parts (9a, 9b; 41a, 41b) of the mounting are assembled by means of engagement by elastic deformation
- 4. (currently amended) Operating device (20; 40) according to one of Claims 1, 2 and 3, characterized in that wherein the parts (9a, 9b) are joined to each other by bringing them together in a direction parallel to the axis of the winding drum (4).

**PATENT** 

- (currently amended) Operating device (20; 40) according to one of Claims 1,-2 5. and 3, characterized in that wherein the parts (41a, 41b) are joined to each other by bringing them together in a direction perpendicular to the axis of the winding drum (42).
- (new) Operating device (20; 40) according to Claim 2, wherein the parts (9a, 6. 9b) are joined to each other by bringing them together in a direction parallel to the axis of the winding drum (4).
- (new) Operating device (20, 40) according to Claim 3, wherein the parts (9a, 7. 9b) are joined to each other by bringing them together in a direction parallel to the axis of the winding drum (4).
- (new) Operating device (20; 40) according to Claim 2, wherein the parts (41a, 8. 41b) are joined to each other by bringing them together in a direction perpendicular to the axis of the winding drum (42).
- 9. (new) Operating device (20; 40) according to Claim 3, wherein the parts (41a, 41b) are joined to each other by bringing them together in a direction perpendicular to the axis of the winding drum (42).
